

South Dakota Agricultural Land Market Trends, 1991-2019: Results from the 2019 SDSU Extension South Dakota Farm Real Estate Survey

Jack B. Davis | SDSU Extension Crops Business Management Field Specialist
Sarah Dunaway | Research Assistant, South Dakota State University

South Dakota Farmland Market Trends, 1991-2019

Introduction

The 2019 SDSU Extension Farm Real Estate Market Survey is the 29th annual survey of agricultural land values and cash rental rates by land use and quality in different regions of South Dakota. Reported are results of the survey and a discussion of factors influencing buyer/seller decisions and positive/negative factors impacting farmland markets. The publication of the survey findings was in response to numerous requests by farmland owners, renters, appraisers, lenders, buyers, and others for detailed information on South Dakota farmland markets.

The 2019 estimates are based on reports from responses¹ to the 2019 SDSU Extension survey. Responses are from agricultural lenders, Farm Service Agency officials, rural appraisers, assessors, realtors, professional farm managers, and SDSU Extension field specialists. All are familiar with farm real estate market trends in their localities.

This report contains an overview and may or may not reflect actual land values or cash rental rates unique to specific localities or properties. Readers should use this report as a general reference and rely on local sources for specific details.

South Dakota Agricultural Land Values, 2019

Procedures to estimate and report land values

Respondents to the 2019 South Dakota Farm Real Estate Market Survey estimated the per-acre value of non-irrigated cropland and pastureland in their county. Responses for non-irrigated land uses are grouped into eight agricultural regions (Figure1). The six regions in eastern and central South Dakota correspond with USDA Agricultural Statistics Districts. In western South Dakota, farmland values and cash rental rates are reported for the Northwest and Southwest regions. Land values and cash rental rates are reported only for privately owned land and should not be considered as estimated values for tribal lands or federal lands.

Central South Dakota sunflower
Photo credit: Ruth Beck

¹ Responses are the number of survey schedules completed for one or two counties. A growing number of respondents completed separate survey schedules for different counties. Each completed survey schedule was treated as a survey response. More details are provided in Appendix 1

The average value per-acre and percent change in value were obtained for each agricultural land use in each region.

Regional differences in agricultural land values are primarily related to major differences in: 1) agricultural land productivity among regions, 2) per-acre values of cropland and pasture/rangeland in each region, and 3) the proportion of cropland and pasture in each region.

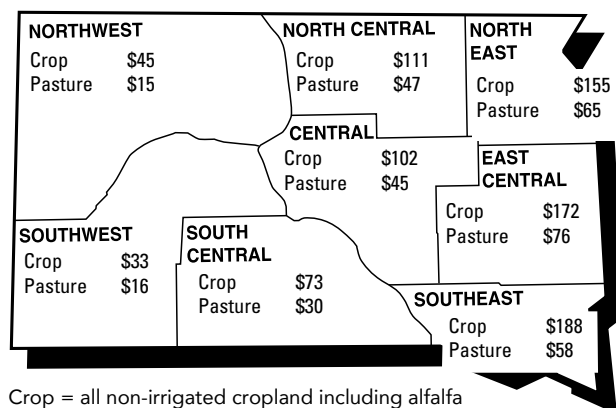

Cash Rental Rates of South Dakota's Agricultural Land

Respondents were asked about annual average cash rental rates per-acre in their locality for non-irrigated cropland and pasture/rangeland (all grass acres). Respondents were also asked to report cash rental rates in their locality for high-productivity and low-productivity land for these land uses. Cash rental rates for each are summarized in Figure 2 and Table 1. The same information is summarized by region and county cluster in Table 2. In some cases, there were too few reports to make cash rental rate estimates at the county cluster level.

The statewide change in average cash rental rates per-acre from 2018 to 2019 decreased for cropland and for pasture/rangeland.

2019 cash rental rates – non-irrigated cropland

Average cash rental rates in 2019 for non-irrigated cropland varied from \$33 to \$188 per-acre in the Southwest and Southeast regions (Figure 1 and Table 1).

Crop = all non-irrigated cropland including alfalfa

Pasture = all grass land

*** Insufficient number of reports to make regional estimates

Figure 1. Average cash rental rate of South Dakota non-irrigated cropland and pasture/rangeland, by region, February 2019, dollars per acre.

Source: 2019 South Dakota Farm Real Estate Market Survey, SDSU Extension.

- Rental rates in Clay, Lincoln, Turner, Union were the highest average cash rental rates for cropland at \$236 per-acre (Table 2)

2019 cash rental rates – irrigated cropland

Average cash rental rates in 2019 for irrigated cropland varied from \$60-275 per-acre in the Southwest and Southeast regions (Table 1).

- The Southeast had the highest average rental rates for irrigated cropland at \$275 per acre.
- Western South Dakota's average irrigated rental rates were \$60 per acre.

2019 cash rental rates – rangeland and pasture

Average cash rental rates per-acre reflect regional differences in productivity and carrying capacity of pasture and rangeland tracts. Average cash rental rates vary from \$15 per-acre in the Southwest region to \$76 per-acre in the East-central region (Figure 1 and Table 2).

- Brookings, Lake, McCook had the highest average pasture/range cash rental rate of \$90 per-acre (Table 2)
- No cluster breakouts were available for the South-central, Southwest and Northwest regions (Table 2)

East Central South Dakota cropland

2019 Per pair and Yearling monthly grazing rates

Average per pair monthly rental rates for 2019 range from \$37 to \$51 for the 2019 year. Average yearling rental rates were between \$31 and \$47 depending on location (Table 3).

Land Values and Changes

For 2019, the statewide average cropland values decreased 4.8% (Table 4). The pasture/rangeland land values have been redefined to include all grass acres. The average state value is down -3.9% for pasture/rangeland. averaged \$1,937 in the Southcentral region, \$1,188 in the Southwest and \$1,408 in the Northwest region (Table 4 and Figure 2).

Survey cropland values decreased from 2018 to 2019 by 4.8% (Table 4).

Survey irrigated cropland values experienced changes from -9.2% to 7.2% between the 2018-2019 years.

- Southeast and East-central region values were between \$7,300 and \$6,000 respectively
- Western South Dakota had the lowest irrigated land values with an average of \$2,182 and a range of \$1,955 to \$2,636 (Table 4)

Pasture/rangeland (all grass acres)

In February 2019; the survey value of South Dakota pasture/ rangeland averaged \$1,203 per-acre, a 3.9% decrease compared to values from 2018.

- East-central and Southeast regions \$3,159 and \$2,518 per-acre.
- Northeast, Northcentral and Central regions varied from \$1,463 to \$1,876 per-acre.
- The lowest pasture values per-acre occur in the western side of the state varying from \$749 to \$1,203 (Figure 2 and Table 4).

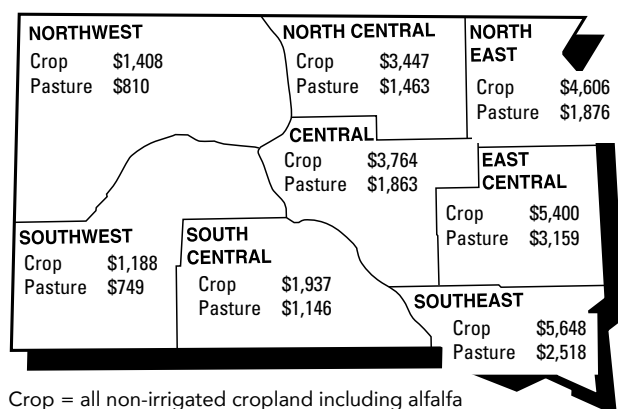

Figure 2. Average value of South Dakota cropland and pasture/ rangeland, by region, February 2019, dollars per acre.

Source: 2019 South Dakota Farm Real Estate Market Survey, SDSU Extension.

Cropland values

The weighted average value of South Dakota's non-irrigated cropland (as of February 2019) is \$3,747 per-acre. (Table 4).

- Regional cropland values tend to gather in three groups.
- East-central and Southeast regions average values of \$5,400 and \$5,648 per-acre.
- Northeast, North-central, and Central regions with average cropland values varying from \$4,606 to \$3,447 per-acre.

Variation in Land Values by Land Productivity and County Clusters

In this section we report the February 2019 per-acre values of average productivity, high-productivity, and low-productivity cropland, and pasture by region and by county clusters within several regions (Table 5).

- Minnehaha-Moody has the highest average cropland value at \$7,500 per acre (Table 5)
- The Southwest region has the lowest average cropland value at \$1,188 per acre
- No cluster breakouts were available for the Southcentral, Southwest and Northwest regions (Table 5)

Substantial variation in per-acre land values occurs due to the difference in land productivity in each region as well as other economic factors, such as ease of farming, soil type, etc. (Table 5)

- Minnehaha Moody for average productivity pasture was \$3,583 per acre.
- In the Southwest region the average value of Pasture is \$749 per-acre (Table 5).
- No cluster breakouts were available for the Southcentral, Southwest and Northwest regions (Table 5).

Pasture/rangeland values varied greatly throughout the state. The values vary based on productivity access to roads, water, facilities, etc.

Rates of Return to South Dakota Agricultural Land

The gross rate of return (gross cash rent as a percent of land value) is used to estimate current rates of return to land. It is calculated from respondent's reported average cash rental rates and their estimated values of leased land. This is a measure of the gross rate of return obtained by landlords, before deduction of

property taxes and other landlord expenses. The 1991 to 2019 trend in the gross cash rent-to-value ratio is depicted in Graph 1.

In 2019, the statewide average gross rates of return (rent-to-value ratio) fluctuated somewhat across land use categories:

- 2.2% for pasture/rangeland.
- 3.4% for non-irrigated cropland.

This is the ninth year that the gross rates of return for cropland has been 4.0% or lower, compared to an average of 5.5% from 2000–2009 and 7.4% during the 1990's (Graph 1). The gross rent to value ratio generally follows interest rates.

Major Reasons for Purchase and Sale of Farmland

Survey respondents were asked to provide a list of major reasons for buying and selling agricultural real estate in their localities. Most (over 85%) of the 2019 respondents provided one or more reasons for the purchase or sale of real estate.

From Graph 2, farm investment and expansion were the top reasons for purchasing farmland.

- Of the total responses, 46% indicated farm expansion as a key reason for purchasing land
- Buying land as a form of investment accounted for 29% of responses
- Purchasing land based on the location accounted for 18% of responses
- Other reasons accounted for 7% of responses

There were several different reasons for sellers offering land for sale. In 2019, estate settlement of farmers and ranchers emerged as the top reason for selling land (Graph 3).

- 43% of the total respondents indicated estate settlement as the most important reason for selling (Graph 3)
- Retirement accounts for 23% of the reasons for selling land
- Increasing liquidity came in at 17% as the third highest reason

Factors Influencing Farmland Markets in South Dakota

Respondents to the 2019 annual survey were asked to list major positive and negative factors affecting the farm real estate market in their localities. These factors play important roles in explaining changes that occurred in the amount of farmland sold in the past year. Also it explains the direction of changes in rental rates and sale prices of farmland. Eighty percent of the survey respondents listed one to three positive or negative reasons (Graph 4).

For positive factors currently impacting the farm real estate market, (Graph 4)

- Forty-three percent of participants indicated low interest rates being a positive factor
- Investment was the second most positive market factor affecting farm market real estate purchases at 23%.

The decline in commodity prices dominated the negative factors in the real estate market. Economic uncertainty and lack of cash flow were also listed (Graph 5).

- Seventy-six percent of respondents indicated low margins as the main reason impacting farm real estate in 2019
- Of the respondents, 14% indicated economic uncertainty as a negative factor affecting the farm real estate market

These graphs indicate the most frequently listed factors affecting the real estate market according to survey participants. Other factors effecting the real estate market include interest rates, demand, available cash, supply of land for sale, etc.

Longer Term Perspective on Farmland Market Changes, 1991 – 2019

Since the amount of land devoted to production agriculture has changed little during this 29-year period, the supply of land is considered relatively fixed. As a result, changes in demand for land are the main factors driving its value and market price. Many factors, influence the demand for agricultural land in states, and yields of other risk free assets, or returns from risky assets.

Longer-term historical data from annual SDSU Extension surveys of agricultural land values and cash rental rates in South Dakota from 1991 to 2019 are located in Appendix Tables 2 and 3 of this report. Long-term trends in average annual cash rates of return are shown in Graph 1.

Conclusion

Given current agricultural prices and economic conditions, it will be important to understand that a large range of variability exists throughout the state, in regions and at the county level in terms of land values and rental rates. Land owners and producers will need to have a good idea of the productivity level of their land, as well as their budget requirements when determining rental rates and sale values.

These values and rates are regional and should only be used as a guide and are not an indication of values for specific properties.

Appendix I: Survey Methods and Response Characteristics

The primary purpose of the 2019 South Dakota Farm Real Estate Market Survey was to obtain regional and statewide information on 2019 per-acre agricultural land values and cash rental rates by land use and land productivity. In addition, we obtained respondents' assessments of positive and negative factors influencing their local farm real estate market and motivations for buyer/seller decisions.

E-mails were sent to 600 potential respondents at the end of February 2019. The survey links were also posted in the South Dakota Banker's Association Newsletters and the American Society for Farm Management and Rural Appraisal (ASFMRA).

Potential respondents were persons employed in one of the following occupations: 1) agricultural lenders (senior agricultural loan officers of commercial banks or Farm Credit Service), 2) loan officers or county directors of the USDA Farm Service Agency (FSA), 3) Extension Service agricultural field specialists, and 4) licensed appraisers and assessors. Some appraisers were also realtors or professional farm managers, while some lenders were also appraisers.

Respondents were asked to report land values and cash rental rate information for non-irrigated cropland, rangeland/pastureland in their locality. Nearly one-third of respondents reported land market information for at least two counties. The number of responses exceeded the number of respondents as some persons (primarily appraisers and lenders) completed multiple survey schedules providing different land value and cash rental data for different counties in their trade territory. Overall, a total of 143 respondents provided 169 usable responses (Appendix Table 1).

Regional average land values by land use are simple average (mean) values of usable responses. Statewide average land values by land use are weighted by the relative number of acres in each region in the same land use. Prior to 2017 all-agricultural land values, regional and statewide, are weighted by the proportion of acres in each agricultural land use. Thus, all-agricultural land values in this report are weighted average values by region and land use. This weighted average approach is analogous to the cost (inventory) approach of estimating farmland values in rural land appraisal.

This approach has important implications in the derivation of statewide average land values and regional all-land values. For example, the two western regions of South Dakota with the lowest average land values have nearly 61% of the state's rangeland acres, 39% of all-agricultural land acres, and only 16% of cropland acres. Our approach increases the relative importance of western South Dakota land values in the final computations and results in lower statewide average land values.

The weighting factors used to develop statewide average land values are based on estimates of non-irrigated agricultural land use for privately owned farmland in South Dakota. It excludes agricultural land (mostly rangeland) leased from tribal or federal agencies, which is mostly located in the western and central regions of the state. Irrigated land is also excluded from regional and statewide all-land values.

The land-use weighting factors were developed from county-level data in the 2012 South Dakota Census of Agriculture and other sources.

Regional average rental rates by land use are simple average (mean) values of usable responses. Statewide average cash rental rates for each land use are weighted by 1) the relative number of acres in each land use and 2) the proportion of farmland acres leased in each region based on 2012 Census of Agriculture data.
