

# 2023 South Dakota Oat Forage Trial Results

Jonathan Kleinjan | SDSU Extension Agronomist

Melanie Caffè | SDSU Oat Breeder

Nick Hall | Agricultural Research Manager

Warren Rusche | Assistant Professor & SDSU Extension Feedlot Specialist

**Table 1.** Cultural characteristics for the 2023 oat forage trials.

Location	Planting date	Previous crop	Fertility	Herbicide	Harvest date
Beresford	data not reported due to drought conditions				
Pierre	4/18/23	soybeans	20 GPA 26.1-0-0-2.6S	1 pt/acre Bromoxynil	6/26/23
South Shore	5/2/23	soybeans	100-0-50	1.5 pt/acre Bronate	6/28/23
Volga	4/24/23	soybeans	100-30-30	1 pt/acre Bromac	6/28/23

**Procedure:** All plots were planted at the rate of 1.2 million PLS/acre.  
Oat plots were harvested at milk to early-dough stage with a Swift LTD forage plot harvester.  
Plot sub-samples were weighed and dried for 72 hours at 140 °F  
Samples were sent to Dairyland Labs (Arcadia, WI) for NIR analysis.

**Notes:** These trials were funded in part by the General Mills Foundation and the South Dakota Crop

## 2023 South Dakota Oat Forage Trial Results

Warrior	11.6	50.5	66.42	39.98	66.70	116.4
<b>Trial Average</b>	11.6	54.9	64.1	37.2	63.7	105.1
<b>LSD (0.05)§</b>	1.0	2.5	1.84	2.40	2.60	6.9

§ Value required (≥LSD) to determine if varieties are significantly different from one another.

<sup>1</sup> Crude protein as a percentage of DM.

<sup>2</sup> Neutral detergent fiber as a % of dry matter. Generally samples with lower NDF are considered higher quality.

<sup>3</sup> Net energy, lactation - an estimate of energy value for dairy cattle diets. (Mcal/cwt, DM basis)

<sup>4</sup> Net energy, gain - an estimate of energy value to support beef cattle growth. (Mcal/cwt, DM basis)

<sup>5</sup> Net energy, maintenance - an estimate of energy value for meeting maintenance needs of beef cattle. (Mcal/cwt, DM basis).

<sup>6</sup> Relative feed value - a value representing how well a forage will be consumed and digested.
