2023 South Dakota Corn Silage Trial Results South Shore

Jonathan Kleinjan | SDSU Extension Agronomist
Kevin Kirby | Agricultural Research Manager
Shawn Hawks | Agricultural Research Manager

Location: 8.5 miles west of South Shore (57263) in Codington County, SD
45.106946°, -97.098724°

Cooperator: South Dakota State University Northeast Research Farm

Soil Type: Kranzburg-Brookings silty clay loams, 0-2% slope

Fertilizer: 90 lb/acre 30-10-10 starter + 300-0-100 broadcast preplant

Previous crop: soybeans

Tillage: conventional

Row spacing: 30 inches

Seeding Rate: 33,500/acre

Herbicide: Pre: 1.5 qt/acre Surpass + 1 pt/acre Atrazine
Post: 1 qt/acre Roundup PowerMax + 3 pz/acre Callisto

Date seeded: 5/5/2023

Date harvested: 9/11/2023

2023 South Dakota Corn Silage Trial Results South Shore

¹ Plant population at harvest (plants/acre).

² Tons per acre harvested corrected to 65% moisture.

³ Dry matter (DM) percentage of harvested corn silage.

⁴ Tons per acre of dry matter (DM).

⁵ Crude protein (CP), % of dry matter.

⁶ Starch, % of dry matter.

⁷ Lignin, % of dry matter.

⁸ Water Soluble Carbohydrates (WSC), % of dry matter.

⁹ Neutral detergent fiber (NDF), % of dry matter.

¹⁰ 30 hour digestibility of NDF (NDFD30) is the amount of NDF digested in 30 hours as a percentage of NDF.

¹¹ 240 hour digestibility of NDF (NDFD240) is the amount of NDF digested in 240 hours as a percentage of NDF.

¹² Milk2006 is the prediction of the amount of milk produced per ton of corn silage dry matter.

¹³ ISU Beef is the prediction of the amount of beef produced per ton of corn silage dry matter.

Procedure:

Corn was harvested for silage by hand cutting at 6 – 8 inches from the ground.

Material was weighed.

Material was chopped through a chipper/shredder.

Green chop samples were frozen.

Samples submitted to a commercial laboratory for nutrient analyses using calibrated NIR instrumentation.
